

## **HUAWEI CLOUD released a new plan for the 2021 financial series of products, moving towards financial cloud native 2.0**

2021-06-04

From June 3rd to 4th, Huawei Smart Finance Summit 2021 was held in Shanghai with the theme of "Digital Intelligent Finance, Upgrading with a Method". At the theme forum "Opening a New Era of Cloud Native, Data Intelligence Empowering Finance" held on June 4, HUAWEI CLOUD released a new plan for launching a series of financial products in 2021, and jointly released a series of cloud native 2.0 financial solutions with eight partners to grow together with finance and build smart finance in all scenarios.

The deep integration of finance and technology has become an opportunity for the development of the financial industry in the context of the digital economy era, and the capabilities of cloud and AI are becoming the core of this round of financial digital transformation.

"Based on the four core capabilities of "full-scenario ultimate experience, comprehensive application modernization, full-stack data intelligence, and full-process business security", HUAWEI CLOUD proposed cloud native 2.0 is based on the four core capabilities of "full-scenario ultimate experience, comprehensive application modernization, full-stack data intelligence, and full-process security". "

### **Standing up and not breaking, moving towards financial cloud native 2.0**

In 2018, Huawei decided to take digital transformation as the company's only focus of change in the next five years, and established the concept of "standing but not breaking" to carry out cloud-native technology transformation, and established a dual-mode IT architecture that integrates the old and new environments, and supports Huawei's IT from traditional to digital and intelligent based on the cloud. Huawei also hopes to openly share its practical experience in digital transformation with customers and partners in the financial industry in the form of cloud services.

Han Gang, chief planner of Bank of Luzhou, introduced the practice of cloud native transformation based on HUAWEI CLOUD, which greatly improved the speed of business launch. Through the integration of the "dual-mode" architecture, the distributed Internet business platform acts as an agent for traditional offline products, uses the existing system capabilities to quickly meet the online needs of users, and improves the system's ability to cope with the impact of huge Internet transactions, quickly integrate internal and external financial services, and quickly customize and release products.

Zhang Ming, President of China CITIC Bank Credit Card Center, gave a keynote speech entitled "Digital Empowerment to Create Warm Smart Finance". China CITIC Bank Credit Card integrates leading financial service advantages and risk control technology to create a

new payment ecosystem, and unites with Huawei Wallet to open the era of credit card 3.0 in mobile phones. **The HUAWEI CLOUD TICS trusted computing service has been used to cooperate with China CITIC Bank on implementing the bank's Huawei Card for win-win cooperation in order to create a safer payment environment and high-quality card experience for users.**
